MedProcure™

Supplies Management Solutions for Long Term Care

MedProcure systems make ordering, maintaining, and tracking medical supplies faster and easier. **suppliesMGR™:LTC**, our solution for long term care facilities, allows you to efficiently charge supplies and services to residents, automate purchasing processes, and effortlessly communicate with multiple systems and vendors.

Flexible Tracking and Charging

suppliesMGR:LTC simplifies the job of tracking supplies and services used by individual residents. You can quickly set up recurring charges so that you no longer waste time on continuous, repeated entries. For other charges, multiple tracking methods give you the flexibility to choose what works best for your staff. Some users print barcode "piggyback" labels to "peel and stick" each time a supply is used. Others use a handheld device to scan the barcode label of each item as it is consumed by a patient.

Our most popular tool for tracking supplies is the *Resident Hot Sheet*. This report lists the items and services previously used by each resident. To record the use of an item, your staff simply marks the appropriate column—and that's it. A quick barcode scan of the items marked on the report then enters the associated charges into the suppliesMGR:LTC system.

Efficiently charge supplies and services to residents.

Automate purchasing processes.

Effortlessly communicate with multiple systems and vendors.

Customizable Export Files

Data from suppliesMGR:LTC can be easily exported to practically any accounting package format. Our solution is device and platform independent: we configure it to meet your needs.

Effortless Inventory Control and Ordering

suppliesMGR:LTC maintains an onhand inventory quantity for each item based on purchases and item usage. The system automatically generates purchase orders for items that fall below their assigned minimum quantity, and allows you to define a "hot list" of frequently purchased items that you can optionally include on purchase orders for specified vendors.

After you edit (if needed) and approve each purchase order, a simple mouse click sends it to the supplier—in the format they prefer. With suppliesMGR:LTC, you have *one* system that communicates with *all* vendors.

Trouble-free Setup

MedProcure takes care of the installation of your system— from loading your inventory and resident lists, to setting up communications with your vendors, to creating accounting export files. And our comprehensive online training ensures that you're fully productive, right from the start.

suppliesMGR:LTC wasn't designed by programmers. Instead, real staff working in long term care facilities guided its development from start to finish. They told us what they needed in a supplies management system… and we listened.
